Note for the INVIGILATOR

Life Sciences teachers are to go through this with the invigilator(s) in the 45 minutes prior to the examination.

The invigilator(s) will need to assess and record the following on the grids provided.

- **Following instructions:**
  The five beakers must be labelled A, B, C, D and E; the test tubes must be labelled 1, 2, 3, 4 and 5.
- **Procedural skills:**
  The level of solutions in test tubes 1–5 is the same (10 ml).
- **Manipulative skills:**
  Exactly 2 ml of liquid (from beaker E) is in the syringe and is placed on the bench. The Life Sciences teacher must show the invigilator how to evaluate that exactly 2 ml is present in the syringe. This must be done ahead of them recording the manipulative skills mark for each learner.

The invigilator(s) must use the grids provided with the Instructions to Teachers and Laboratory Technicians to record the manipulation marks. The invigilator(s) must **circle either the 0 or the 1 in EACH case and total the mark out of 3.**

E.g.

CRITERIA		
Following instructions	0	1
Procedural skills	0	1
Manipulative	0	1
TOTAL		**(3)**

When the candidates hand back the examination scripts at the end of the examination period, the invigilator(s) MUST transfer these 3 marks onto the front cover of the script in black or blue pen. The mark sheets MUST also be placed in an envelope and returned along with the scripts.
