

NOTE FOR THE INVIGILATOR

The invigilator will need to record the following information on the grids provided.

Following instructions:

The four test tubes must be clearly labelled A, B, C and D.

Test tube contents:

The same volume of solution/liquid needs to be in all four test tubes in front of the candidate. All contents should be at the same level.

Manipulation:

The content of test tube A is pale blue in colour and test tube B is lilac or light purple. Do not worry about the colour of test tubes C and D at this stage of checking.

IMPORTANT

When the candidates hand back their scripts at the end of the examination period, the invigilator **MUST** transfer the information for these 3 marks onto the front cover of the script. It is necessary to circle either the 0 or the 1 in **EACH** case and total the mark out of 3 on the script of each candidate.
